

## DL Custom: Datacenter Cages

DL Custom Data Center Cage is a highly secure data center server room safeguard fencing system that combines maximum protection and aisle containment if required. Our modular panel fencing systems – with or without mesh ceilings – fit any ceiling height. The mesh panels allow proper air circulation and are specifically built to fit around existing installations and obstacles.

Our offer includes complete installations with mesh or steel sheet panels. The latter are primarily used to protect an area from view. Finally, there are several solutions to provide a proper floor environment for computers and servers, as well as secure solutions for filling in under raised access computer flooring and over dropped ceilings.

### Features and benefits

- A cost-effective and flexible solution
- Modular design for easy reconfiguration
- Adaptable to fit any height
- Ceiling and wall-mounting capabilities
- Allows proper air circulation, light and sprinkler penetration
- Built to the durable standards of our enclosure systems, the rugged steel construction ensures structural integrity.

## Specifications

**Panels:** 10-gauge welded-wire mesh with 1" x 1" or 2" x 2" grid openings (other sizes available)

**Posts:** 2" x 2", 14-gauge steel with welded mounting plates.
